Warwick Business School leads best practice in learning excellence with Lanner partnership

Warwick Business School partners with Lanner Group to enhance Specialist Masters Programme and Simulation Research Group

Warwick Business School, one of the largest business schools in the UK, has announced a partnership with Lanner Group Ltd, the business process analysis company.

The partnership will support the focus of the university and ensure a positive influence on furthering the use of simulation and process modelling within the fields of business and management. It involves a number of specific initiatives including support for Warwick Business School's MSc in Management Science & Operational Research and affiliated Simulation Research Group.

Professor Stewart Robinson who heads up both the MSc and the research group comments:

“Warwick Business School’s goal is to educate and develop excellent students, and in turn become recognised as the leading university-based business school in Europe. Our MSc in Management Science & Operational Research takes a multi-disciplinary approach in teaching students how to use different analytical models and tools to predict and evaluate situations. The input and support of Lanner, a leading player in this field, is invaluable in putting theory into practice and ensuring a thorough teaching of the subject.”

Warwick Business School is the latest addition to Lanner’s global academic partner programme, designed to foster research into simulation, support advanced education in simulation and provide the Lanner Group with input into product design and testing.

About Lanner Group Ltd

Lanner is transforming the way managers and service owners in large, complex organisations improve delivery and process performance. Lanner is organised to add value at each stage of a customer’s journey offering consulting that provides guided discovery and expert analysis of the problem, applications that empower process users and increase an organisation’s ability to improve and save money, and automated simulation components embedded in leading software suites. Lanner’s proven

simulation and planning technology is supplied to simulation professionals through its Witness® brand and as embedded components to software developers under its L-Sim™ brand. Based in the UK with subsidiaries and partners in Europe, The Americas and the Far East, Lanner applications are used by more than 3,500 companies globally and its services group has delivered projects to over 1,000 customers. www.lanner.com
